

Rotary Joints

Series H – US Catalog

NPT Threads

Rotary Joints Series H

Standard series H and HW are designed up to Nominal Diameter 4" (100 mm) to accommodate transfer of water, steam and thermal oil under temperature, rotation and pressure.

The fortified designs HWA, HWB, HWX are designed for higher speeds, higher loads and bigger sizes.

A flexible modular system with housing flange and gasket connections, which can be subsequently modified.

Operating manuals are available at www.maieramerica.com or directly from our company. Our sales staff will be happy to provide you with user identification and password. After placing an order you will find this information on the packing list.

Standard Series

- Housing made of ductile cast iron, cover and rotor made of chrome steel, rotors for Nominal Diameter 2 1/2" (65 mm) and above made of carbon steel, sealing face made of stainless steel. High temperature resistant spring made of stainless steel.
- Sealing ring of compression-loaded wear-resistant graphite carbon. Due to its design, it is shatter-proof under high pressure. Series HW with metal impregnated graphite carbon, is especially suitable for thermal oil and for considerably higher pressures, temperatures and speeds. The bearing is secured against rotation. Slide bushing is used as gap seal for rotating inner pipe. There is a wear indicator for the sealing ring at the rotor.
- Easy to repair. Maintenance-free, no relubrication.
- Connection to rotating pressurized system by means of:
 - Standardized connecting piece with right-hand or left-hand male thread NPT. BSP threads (ISO228) available - see European catalog D14507e.
 - K flange with conical inner ring – quick disconnect (must be ordered separately).
- Radial and axial housing connection with right hand NPT thread as well as with flange connections available.

We recommend using flange connections for thermal oil.
Screw thread for fixed inner pipe is always right handed, even when thread on rotor is left handed.
- Rotation of the housing is prevented by means of the anti-rotating fork on the cover, where the locking bolt engages. Thermal expansion of the roller and wear of seals and bearing cause an axial displacement of the housing (away from the roller). Anti-rotation device, hose connection and inner pipe must not impede this axial displacement. Otherwise the rotary joint will not operate or seal properly.

The fortified designs HWA, HWB, HWX are

- More robust
 - Greater distance between bearings, double-sized cover bushing, two large bearings from Nominal Diameter 3" (75 mm) and above.
 - Anti-rotation device between the bearings ensures low moment of friction.
 - Housing flange connection is sealed with a gasket, no soldering.
- Faster
 - Up to 50 % higher speed possible than standard series.
- More flexible
 - Modular system: please specify required position when placing the order.
 - Housing flanges can be screwed in later.

The fortified designs are equipped as follows:

- Housing of ductile cast iron, HWA Nominal Diameter 4" (100 mm) and above is made of carbon steel in welded design.
- Rotor of stainless steel 316 Ti (1.4571) or PVD coated steel. All other steel parts in stainless steel.
 - Metal-impregnated sealing ring, suitable for high pressure.
 - Housing bearing secured against rotation.
 - Connection to the rotating pressurized system by means of K-flange and conical inner ring (quick disconnect).
 - Radial and axial housing connections with right-hand thread NPT. As an option, Nominal Diameter 1 1/4" - 4" (32-100 mm) with screw flange and gasket, ANSI 300 lbs; Nominal Diameter 4" - 12" (100-300 mm) with welded flanges ANSI 300 lbs. For Nominal Diameter 1/2" - 1" (15-25 mm), we offer flexible metal hoses sealed with a gasket, since housing flanges would be too heavy for this purpose. Rotation of the housing is prevented by means of the anti-rotating fork at the housing.
 - From Nominal Diameter 4" (100 mm and above), the unit weight is to be partially supported by means of the housing lug, where the locking bolt engages.
- There are numerous designs available:
 - HW1 -780 and HWA, B, X2 -780. Based on standard basic design (HW 1) and on fortified design (HWA, B, X), however suitable for higher loads with rotors made of stainless steel 316 Ti (1.4571) or PVD coated steel, with screw flanges, sealed with gasket, ANSI 300 lbs.
 - HWX for stationary inner pipe, right-hand thread.
 - HWB for rotating inner pipe, bearing bush rotating with rotor, no wear. Gap seal, suitable for liquids, low pressure loss between flow and return.
 - HWA for rotating inner pipe, bearing bush rotating with rotor, no wear. Carbon bearing with steel jacket, sealed against housing via O-ring. Rotor bushing sealed against inner pipe via O-ring. Suitable for steam and high pressure difference between inlet and outlet.
 - HWA for big Nominal Diameter > 4" (100 mm) in welded design.

Application data

Series		H	HW	HW

Loose Flanges for Housing Connection

Sealing with gaskets

The flanges consist of a threaded piece with male thread ISO 228, combined with a slip flange ANSI 300 lbs.

Sealing between flange and rotary joint housing by means of a gasket.

Suitable for HWA, HWB and HWX.

Dimensional table for screw flanges, rated pressure 300 lbs

Maximum application data (pressure reduction factor at higher operating temperatures considered):

- water 406 psi and 446°F
- thermal oil 145 psi bar and 572°F

Please order a gasket 2 for the connection flange, if required.

Material: steel, painted.

Special stainless steel version available upon request.
